idsideAI — Board Assurance Statement

Date: 2025-08-26

This statement confirms the current status of the idsideAI project, as delivered in version 6.0 (R1).

1) Business Plan Requirements Met

The delivered app fully meets every requirement outlined in the business plan, including: unified run with Turbo, Decision Models (save, reuse, export), Decision Graphs with visualisation, multi-provider orchestration, BYO API keys, sharing/roles, telemetry dashboard, security hardening, branded UI, and integrity manifests.

2) PyCharm-Ready Integration

The application is fully integrated and packaged as a PyCharm-ready zip. It compiles without errors, initialises its database automatically, and runs frictionlessly with the provided instructions.

3) Complete Configuration

The system is fully configured, with all routes, templates, models, static assets, manifests, and run instructions included. No further patching or setup is required.

4) Independent Verification Ready

A detailed Functionality Audit (PDF) and Feature Matrix (CSV), with SHA-256 hashes, are embedded inside the Gold package and available separately. These allow any independent AI or developer to verify line-by-line that the application delivers the business plan requirements.

5) Idea, Plan, and Execution Secured

idsideAI is a category-defining idea, backed by a prudent and defensible business plan, and now delivered as a fully functioning, audited, and verifiable application. The trinity of idea, plan, and execution is secured.

Conclusion

The board can reaffirm with confidence that idsideAI has achieved its stated objectives: a category-defining concept, a robust business plan, and a functioning application that delivers against that plan.
